

# A Primer on Mitaeme

Elia

## 1 SPELLING & PRONUNCIATION

Mitaeme features twelve consonants. In this primer, the letter used to write each consonant will be included between angle brackets,  $\langle \dots \rangle$ , while the pronunciation will be written in the International Phonetic Alphabet and placed between forward slashes,  $/\dots/$ , and a rough example in Standard American English provided.

$\langle m \rangle$ /m/ “mail”	$\langle n \rangle$ /n/ “nail”		
$\langle p \rangle$ /p/ “pin”	$\langle t \rangle$ /t/ “tin”	$\langle c \rangle$ /tʃ ~ ʃ/ “chin” ~ “shin”	$\langle k \rangle$ /k/ “kin”
$\langle f \rangle$ /f ~ f/ “fed”	$\langle s \rangle$ /s/ “said”		$\langle h \rangle$ /x ~ h/ “head”
$\langle w \rangle$ /w ~ v/ “wack”	$\langle l \rangle$ /l/ “lack”	$\langle y \rangle$ /j/ “yak”	

All consonants and vowels are written with only one letter and their spelling and pronunciation never changes. Thus,  $\langle c \rangle$  is always /tʃ/, the sound at the beginning of “choose,” never /k/, the sound at the beginning of “car” which is always written with a  $\langle k \rangle$ . Mitaeme’s vowels are also quite simple as there are only five:

$\langle i \rangle$ /i/ “leak”	$\langle u \rangle$ /u/ “boot”
$\langle e \rangle$ /e/ “speck”	$\langle o \rangle$ /o/ “boat”
$\langle a \rangle$ /a/ “hand”	

Technically, the Standard American English approximates here are not very accurate. English’s  $\langle e \rangle$ ,  $\langle o \rangle$ , and  $\langle a \rangle$  are not the same as their Mitaemen counterparts. Mitaeme’s vowels are closest to those found in Spanish, as in /i/ “pira,” /e/ “pero,” /a/ “casa,” /u/ “curso,” and /o/ “coser.” Similarly, the Japanese vowels are good examples: /i/ “二胡 (niko),” /e/ “猫 (neko),” /a/ “中 (naka),” /u/ “茎 (kuki),” and /o/ “ここ (koko).” However, the Mitaemen /u/ is rounded, unlike the Japanese /u/.

Vowels are always pronounced the same way regardless of where they appear, and they never affect the pronunciation of adjacent consonants. However, there are certain rules concerning the pronunciation of diphthongs (which we’ll get to soon). Having

covered all seventeen phonemes, we can now talk about the ways they can combine together.

## 2 SYLLABLE STRUCTURE

Syllables are described as having an optional beginning consonant (an onset), an optional on-glide, a vowel, an optional off-glide, and an optional ending consonant (a coda).

Onset	On-Glide	Vowel	Off-Glide	Coda
ω	μ	ν	μ	κ
{ any }	{ j w }	{ i e u o a }	{ j w }	{ n }

The on-glide may only appear when there is an onset consonant, while the off-glide can appear with or without a coda. However, no on-glide is allowed when the onset is either /j/ or /w/. In addition, /j/ cannot serve as an on-glide or off-glide in a syllable containing the vowel /i/, and the same goes for /w/ and the vowel /u/. Lastly, a word cannot contain a syllable ending in a vowel followed by a syllable beginning with another vowel.

When serving as a glide, /j/ is written as ⟨i⟩ and /w/ is written as ⟨u⟩. This helps distinguish between syllables ending in a nasal that are followed by an onset /j/ and those ending in a vowel and followed by an onset /n/ with an on-glide /j/, as in ⟨ania⟩ /a.nja/ and ⟨anya⟩ /an.ja/. Similarly, a word like ⟨aiata⟩ is pronounced /aj.a.ta/, whereas ⟨ayata⟩ is always /a.ja.ta/. However, this does lead to some potential ambiguities that require an explicit rule: when following an onset consonant, the sequences ⟨ui⟩ and ⟨iu⟩ are always on-glides followed by vowels, as in /kwi/ and /kju/, and are never vowels followed by off-glides, as in \*/kuj/ or \*/kiw/. In any case, no words are distinguished based on syllable boundaries alone, but for clarity and aesthetics this spelling is preferred.

A coda /n/ is pronounced and written as ⟨m⟩ when it appears before /m p w/. Its spelling remains the same before ⟨k⟩ but it is pronounced as [ŋ] (the “ng” in “sing”). Otherwise, it is written ⟨n⟩ and pronounced /n/.

## 3 COMPOUNDS

A quick note on compound words is required, as this introduces an additional character into the spelling system: the hyphen. Compound words have each constituent word separated by a hyphen. Thus, the word for “motorcycle” which is composed of the Mitaemen words, ⟨moto⟩ and ⟨saikale⟩, is written as ⟨moto-saikale⟩. While this is prescribed, it is one of Mitaeme’s only flexible rules. In a situation where the meaning of a word is relatively unambiguous, dropping the hyphen from compound words is common. You may see both ⟨moto-saikale⟩ and ⟨motosaikale⟩. The hyphen is used to disambiguate when necessary and to form new compounds that aren’t already in common use.

Some lexicalized adjective-noun pairs—such as the plural second- and third-person pronouns, ⟨ta nin⟩ and ⟨ta ye⟩—may also appear hyphenated, ⟨ta-nin⟩ and ⟨ta-ye⟩, though this is done for clarity’s sake and ease-of-reading.

## 4 GRAMMAR

Mitaeme’s grammar is designed to be elegant, simple, and fun. We can summarize its basic structure in a few rules.

1. **No Inflection** —Mitaemen words have only one form and it never changes. Nouns do not take cases, and verbs do not change form to agree with their subject or even to indicate certain tenses. Instead, extra words are included to convey this information. Nouns can undergo reduplication (being repeated) to indicate plurality, and a reduplication of verbs may indicate emphasis or pluractionality. While inflection and affixation are absent, compounding is present, as already discussed. Furthermore, certain particles, such as ⟨hase⟩, can be used to make nouns into verbs and vice versa.
  - pesin pesin suo-tei ale a mi te kasa —person~PL yesterday go LOC 1SG GEN house  
*People went to my house yesterday.*
  - peinta-pesin ale kan inlan-eme puko —painter go read English book  
*The painter will read an English book.*
  - mi le hase peinta ta-ye te auto —1SG PFV VB paint pl-3 GEN car  
*I painted their cars.*
2. **SVO Word Order** —Mitaeme features an SVO, or subject-verb-object, word order. If context is clear, the subject may be dropped. Mitaeme also features zero copula, meaning you never need to include words like “is” and “are”—they are implied.
  - mi te kafe haha —1SG GEN coffee hot  
*My coffee is hot.*
  - nin ci cokolate —2SG eat chocolate  
*You are eating chocolate.*
3. **Preposition → Possessor → Adjective → Noun → Relative Clause** —Modifiers such as possessors and adjectives precede the nouns they modify. However, relative clauses follow their respective noun. Gentive constructions, which can indicate possession, origin, or composition are marked with the particle, ⟨te⟩. Relative clauses are introduced by the particle, ⟨ke⟩. Compounds, like nouns modified by verbs, have their head noun in the rightmost position. For example a “teahouse” is a ⟨ca-kasa⟩, literally “tea-house,” rather than a ⟨\*kasa-ca⟩, as it might be in a language such as Spanish.
  - nin te pueno ca cici —2SG GEN good tea cold  
*Your good tea is cold.*
  - nin te ca ke mi tinke pueno —2SG GEN tea REL 1SG drink good  
*Your tea I am drinking is good.*
4. **Adverb → Verb** —Similar to adjectives, adverbs precede the verb they modify. In fact, adjectives and adverbs are a single class of words that may be used in either position, where meaningfully applicable. The placement of adverbs is not flexible as it is in English; they cannot come afterwards.

- nin yuwa kan puka —2SG early read book  
*You read a book early.*
- mi kai tinke kai ca —1SG much drink much tea  
*I often drink a lot of tea.*

5. **Serial Verb Constructions** —Mitaeme makes use of serial verb constructions to convey complex events. This is done by chaining verbs together, one after the other. If a verb is followed by an object in one of these chains, it is assumed to be the subject or instrument of the subsequent verb.

- mi usa naife kata papeu —1SG use knife cut paper  
*I use the knife to cut the paper.*
- ye sita leka siensia puka —3SG sit write science book  
*She sits and writes a scientific book.*

6. **Particle Order** —Particles may appear sentence-initially, sentence-finally, or before the verb they modify. Double negatives may be used for emphasis without canceling out. In serial verb constructions, particles must come before any verb which they specifically modify. This includes situations in which auxiliary verbs, such as ⟨pei⟩, are used in tandem with other verbs.

- mi na tinke mi te ca na —1SG NEG drink 1SG GEN tea NEG  
*I do not drink my tea.*
- ta pesin pei siyou akuce —all person PV free birth  
*All humans are born free.*

There are no exceptions to the rules outlined here, except perhaps in the writing of personal names. Otherwise, one shouldn't loan words into Mitaeme without altering them, if necessary, to fit the pronunciation, spelling, and syllable structure rules outlined here. For this reason, there is a strong preference for words that feature sounds with close analogues in Mitaeme. By maintaining a 1-to-1, consistent spelling system and a bare-bones sound system, we avoid putting unnecessary strain on new learners, even if it does necessitate making alterations to new words added to the lexicon. On this topic, we might as well devote the last section of this primer to a few vocabulary words so that you can start using the language.

## 5 FUNCTIONAL VOCABULARY

We're going to separate our vocabulary lists into two sections: functional and substantive. In this list, we'll cover many of the function words that appear with higher frequency in Mitaemen texts.

- **mi** —*pronoun*, “I / me” —from many Indo-European languages —This is the singular, first-person pronoun. Since Mitaeme does not ever change the forms of its words, there is no difference between “I” and “me.”
  - mi ale a nin te kasa —1SG go LOC 2SG GEN house  
*I am going to your house.*

- **nin** —*pronoun*, “you” —from Mandarin Chinese —This is the singular, second-person pronoun. It is used to refer to the listener. Mitaeme does not make any distinction between informal and formal forms of “you,” as can be found in many of the Romance and Sinitic languages, among others. The formal pronoun from Mandarin, 您 (nín), is borrowed rather than the informal, 你 (nǐ), due to the similarity between ⟨mi⟩ and ⟨ni⟩. By adding the ⟨n⟩, it is easier to distinguish between the first- and second-person in casual speech.

– nin ai mi ma —2SG love 1SG INT  
*Do you love me?*

- **ye** —*pronoun*, “they/she/he” —from Hindustani —This is the singular, third-person pronoun. It is used to refer to a single person other than the speaker or listener. Mitaeme does not distinguish between gendered third-person pronouns such as “he” or “she,” instead using a single pronoun for both, similar to languages like (spoken) Finnish.

– ye solen peinta tisa mesa ke mi pai —3SG OBLIG paint PROX table REL 1SG buy  
*They should paint this table I bought.*

- **mi-mi / mimi** —*pronoun*, “we (exclusive)” —There are two forms of “we” in Mitaeme; the first, ⟨mimi⟩, is exclusive, meaning it does not include the listener. For example, if you were talking to someone about how you and your friends went somewhere, you would use ⟨mimi⟩, but if the person you were speaking to was also there, then you would use the inclusive form, ⟨minin⟩.

– mimi hafe kai auto —1~PL have many car  
*We have many cars.*

- **mi-nin / minin** —*pronoun*, “we (inclusive)” —This version of “we” is inclusive, meaning it includes the listener.

– so minin mita (mita) —AFF 1+2PL friend(~PL)  
*Yes, we are friends.*

- **ta nin / ta-nin** —*pronoun*, “you all” —calque of English, *y’all* —This is the plural, second-person pronoun. It is used to talk about groups that include the listener but not the speaker.

– ta nin ma leka pa pensi —all 2 INT write INSTR pencil  
*Did you all write in pencil?*

- **ta ye / ta-ye** —*pronoun*, “they all” —extended from ⟨ta nin⟩ —This is the plural, third-person pronoun. It is used to talk about groups that include neither the speaker nor the listener.

– ta ye na canna usa kampiuta ne —all 3 NEG know use computer EMPH.INT  
*They don’t know how to use a computer, right?*

- **cunya** —*noun / adjective*, “zero / 0” —from Sanskrit, शून्य (śūnyá) —Numbers in Mitaeme all act like both nouns and adjectives. Therefore, one can use ⟨cunya⟩ to both modify another noun or to refer to “zero” of something.

– mi hafe cunya pati —1SG have zero bowl —I have zero bowls.

- **yi** —*noun / adjective*, “one / 1” —from Mandarin Chinese, 一 (yī)
- **tu** —*noun / adjective*, “two / 2” —from English, *two*
- **tin** —*noun / adjective*, “three / 3” —from Marathi, तीन (tīn)
- **apa** —*noun / adjective*, “four / 4” —from Tagalog, *apat*
- **lima** —*noun / adjective*, “five / 5” —from Indonesian, *lima*
- **sita** —*noun / adjective*, “six / 6” —from Arabic, ستة (sita)
- **siete** —*noun / adjective*, “seven / 7” —from Spanish, *siete*
- **haci** —*noun / adjective*, “eight / 8” —from Japanese, 八 (hachi)
- **no** —*noun / adjective*, “nine / 9” —from Hindustani, नौ (nau)
- **sen** —*noun / adjective*, “ten / 10” —from German, *zehn*
- **kai** —*adjective*, “many / much / a lot” —from Hindustani, कई (kaī) —This is a highly flexible word; it can be used to indicate a lot of something, as in ⟨kai tei⟩, “many days,” or frequency as in ⟨mi kai ale⟩, “I often go.”

– mi hatie kai kafe koi koi —1SG want many coffee please~EMPH  
*I want a lot of coffee, please.*

- **koi** —*interjection / particle*, “please / thank you / excuse me / would you,” OPTATIVE (OPT) —from Cantonese, 唔該 (m4 goi1) —Mitaeme makes use of a single word for both “please” and “thank you,” and it can also be used as a particle to indicate the optative mood or to politely ask people to do something.
- **te** —*particle*, GENITIVE (GEN) —from Mandarin, 的 (de) —You have already seen much of this particle, but to be explicit: it serves as a genitive marker, coming after a noun and indicating possession, origin, or composition.

– mi hatie nin te cala ke yena pesin hafe —1SG want 2SG GEN water MEDI  
 person have  
*I want your water which that person has.*

- **ke** —*particle*, RELATIVIZER (REL) —from Spanish, *que* —The relativizer particle is used to introduce a relative clause which can modify a noun or serve as a complement to certain verbs. When modifying a noun, the head noun (the word being modified by the relative clause) may take the role of subject or object. It may also take the role of location, as in “the place that I went to,” or instrument, as in “the knife I cut the cake with,” via the addition of a preposition between the modified noun and the relativizer particle.

– mi tampien ale a yena meta a ke nin ale —1SG also go LOC MEDI place LOC  
 REL 2SG go  
*I have also been to that place you went to.*

– mi le kome hafe yena naife pa ke nin kata keike —1SG PFV come have MEDI  
 knife INSTR REL 2SG cut cake  
*I brought the knife with which you cut the cake.*

- **ma** —*interjection / particle*, INTERROGATIVE (INT) —from Mandarin, 吗 (ma) — The interrogative particle is added to sentences to make them into questions. It can also modify nouns such as ⟨meta⟩ “place,” ⟨pesin⟩ “person,” ⟨wa⟩ “thing” in order to make ⟨ma meta⟩ “where,” ⟨ma pesin⟩ “who,” and ⟨ma wa⟩ “what’.”
  - ma pesin yena —INT person MEDI  
*Who is that?*
- **so** —*interjection / particle*, EMPHATIC / AFFIRMATIVE (EMPH / AFF) —from English, *so*, and Japanese, そう (sou) —The particle, ⟨so⟩, is the general agreement / emphatic particle, used to indicate that one agrees with something or to strongly assert what one is saying.
  - so ta ye sisua —EMPH all 3 student  
*Yes, they are students. / They really are students.*
- **na** —*interjection / particle*, NEGATIVE (NEG) —This is the general negative, used to indicate disagreement or that something is not true.
  - na ta ye sisua —NEG all 3 student  
*They are not students.*
- **pei** —*auxiliary verb*, PASSIVE VOICE (PV) —from Mandarin, 被 (bèi) —The passive voice auxiliary takes a transitive verb (one that requires an object) and makes it intransitive (one that requires only a subject), elevating the old object to the position of the new subject. The old subject may be reintroduced with the preposition, ⟨pa⟩. Any indirect object can take the position of the old object.
  - metisin ma pei tewa a nin pa ye —medicine INT PV give LOC 2SG INSTR 3SG  
*Was the medicine given to you by her?*
- **solen** —*auxiliary verb*, OBLIGATORY (OBLIG) —from German, *sollen* —This auxiliary marks obligation, what one ought or should do.
  - nin solen ale a mi te kasa —2SG OBLIG go LOC 1SG GEN house  
*You should go to my house.*
- **le** —*auxiliary verb*, TRANSFORMATIVE (TRANS) / INCHOATIVE (INCHO) / PERFECTIVE (PFV) —from Mandarin, 了 (le) —This is a quite flexible auxiliary verb, used to indicate that an action involves a transformation or change of state; used to indicate the beginning of an action; or used to talk about a complete / completed action.
  - mi le ale a kasa —1SG INCHO go LOC house / 1SG PFV go LOC house  
*I am going home. / I went home.*
  - ye (mi te) mita le —3SG (1SG GEN) friend TRANS  
*He has become my friend. / He became my friend.*
- **hase** —*particle / verb*, “to do / to become / to make (something)” / GENERAL VERBALIZER (VB) / CAUSATIVE AUXILIARY (CAUS) —from Spanish, *hacer* —This is among the most flexible verbs in the language, used to talk about the performance / carrying out of an action, the creation of something, or a transformation. Furthermore, it is used as a particle to modify nouns, turning them into verbs with the general sense of “doing” some typical action associated with the noun. When

used in a pivot construction, in which the object of a preceding verb becomes the subject of the subsequent verb, ⟨hase⟩ imparts a causative voice.

- mi le hase ca fo nin —1SG PFV do PURP 2SG  
*I made tea for you.*
- ta nin hase palu kau kau —PL-2 VB milk cow~PL  
*You all are all milking the cows.*
- mi le hase nin tewa pensi a ye —1SG PFV CAUS 2SG give pencil DAT 3SG  
*I made you give the pencil to her.*

- **a** —*preposition / particle*, LOCATIVE (LOC) / DATIVE (DAT) —from Spanish, *a* — This is a widely-used particle as it serves as the language’s primary preposition, indicating location and direction, similar to English’s “at / on / to,” but in addition it is used to mark the indirect objects of transitive sentences.

- mi ale a mi te kasa —1SG go LOC 1SG GEN house  
*I am going to my house.*
- nin le tewa cokolate a mi —1SG PFV give chocolate DAT 1SG  
*You gave me chocolate.*

- **tisa** —*adjective / noun*, “this / this thing,” PROXIMAL (PROX) —from English, *this* —This is the proximal demonstrative, used to talk about something that is close to or associated with the speaker.

- tisa mesa mi te —PROX table 1SG GEN  
*This table is mine.*
- tisa mi te mesa —PROX 1SG GEN table  
*This is my table.*

- **yena** —*adjective / noun*, “that / that thing,” MEDIAL (MEDI) —from German, *jener* —This is the medial demonstrative, used to talk about something that is close to or associated with the listener.

- mi na kan yena puka —1SG NEG read MEDI book  
*I am not reading that book. / I have not read that book.*

- **akeli** —*adjective / noun*, “that over there / that thing over there,” DISTAL (DIST) —from Portuguese, *aquele* —This is the distal demonstrative, used to talk about something that is close to neither the speaker nor the listener.

- akeli auto hafe yelou peinta —DIST book have yellow paint  
*That car over there has yellow paint.*

- **i** —*conjunction*, CONJUNCTION (CONJ) —from Russian, и (i) —The coordinating conjunction, this serves to conjoin both noun phrases and clauses (unlike in some languages where separate conjunctions are used for these two roles). In this way, ⟨i⟩ is much like English’s “and.” However, since Mitaeme makes use of serial verb constructions, you won’t often see it in between verbs which share the same subject.

- mi le ale a kasa i ye ci —1SG PFV go LOC house CONJ 3SG eat  
*I went home and he ate.*

## 6 SUBSTANTIVE VOCABULARY

Now that we've covered many of the basic function words, we can leap into some more vocabulary which should allow you to actually talk about the world around you.

- **eme** —*noun*, from Sumerian, 𒂍𒅗 (eme)  
“language / tongue / tongue (body part)”
- **men** —*noun*, from Cantonese, 名 (meng4-2)  
“name / given name / term”
- **meta** —*noun*, from Russian, ме́сто (mésto)  
“place / location”
- **wa** —*noun*, from Vietnamese, vật  
“thing / inanimate object / abstract idea”
- **pesin** —*noun*, from Nijjǎ, pesin  
“person / individual / human being”
- **kasa** —*noun*, from Portuguese, casa  
“house / home”
- **teca** —*noun*, from Hindustani, देश (deś)  
“nation / country”
- **meli** —*noun*, from Tok Pisin, meri  
“woman / female / female-identifying person”
- **empi** —*noun*, from English, enbi  
“non-binary person”
- **laki** —*noun*, from Indonesian, laki  
“man / male / male-identifying person”
- **mama** —*noun*, from various languages  
“mother / mama / mom / female-identifying parent”
- **nana** —*noun*, by analogy from ⟨mama / papa⟩ “mother / father”  
“non-binary parent”
- **papa** —*noun*, from various languages  
“father / papa / dad / male-identifying parent”
- **kafé** —*noun*, from Spanish, café  
“coffee / coffee beans”
- **ca** —*noun*, from Mandarin, 茶 (chá)  
“tea / tea bag / tea leaves”
- **palu** —*noun*, from Telugu, పాలు (pālu)  
“milk / sap / juice”
- **ciwa** / **ci-wa** —*noun*, calque of Mandarin, 食物 (shíwù), “eat-thing”  
“food / meal / dish”

- **tinkewa / tinke-wa** —*noun*, calque of Japanese, 飲み物 (nomimono), “drink-thing”  
“drink / beverage”
- **haha** —*adjective*, a priori  
“hot / warm / heated”
- **cici** —*adjective*, a priori  
“cold / cool / cooled”
- **umai** —*adjective*, from Japanese, うまい (umai)  
“delicious / tasty”
- **ci** —*verb*, from Mandarin, 吃 (chī)  
“to eat / to consume / to ingest”
- **tinke** —*verb*, from German, *trinke(n)*  
“to drink / to imbibe”
- **piala** —*noun*, from Hindustani, प्याला (pyālā)  
“cup / mug / glass / drinking vessel”
- **halaya** —*noun*, from Arabic, غَلَّاية (ḡallāya)  
“teakettle / kettle / (water) boiler”
- **ale** —*verb*, from French, *aller*  
“to go / to move / to walk”
- **hatie** —*verb*, from Russian, хотеть (xotét’)  
“to want / to desire”
- **pana** —*verb*, from Hindustani, पाना (pānā)  
“to get / to obtain / to gain”
- **tei** —*noun*, from Naijá, *dey*  
“day”
- **suo** —*adjective*, from Mandarin, 昨 (zuó)  
“yesterday / recent(ly)”
- **suotei / suo-tei** —*noun / adjective*  
“yesterday”
- **nai** —*adjective*, from Vietnamese, *nay*  
“today / current(ly) / ongoing / present(ly)”
- **naitei / nai-tei** —*noun / adjective*  
“today”
- **ala** —*adjective*, Hindustani, अगला (aglā)  
“next / subsequent”
- **alatei / ala-tei** —*noun / adjective*  
“tomorrow”

- **ta** —*adjective*, from Vietnamese, *tất*  
“whole / all”
- **usa** —*verb*, from Spanish, *usar*  
“to use / to utilize”
- **leka** —*verb*, from Bengali, লেখা (lekha)  
“to write / to compose”
- **kan** —*verb*, from Mandarin, 看 (kàn)  
“to look (at) / to see / to watch / to read”
- **saikale** —*noun*, from Hindustani, साइकल (sāikal)  
“bicycle / bike”
- **motosaikale / moto-saikale** —*noun*, from ⟨moto⟩ + ⟨saikale⟩  
“motorcycle / moped / scooter”
- **auto / auto-mopile / automopile** —*noun*, from Spanish, *automóvil*  
“car / automobile”
- **kali** —*noun*, from Hindustani, गली (galī)  
“street / lane / road / route”
- **mita** —*noun*, from Hindustani, मित्र (mitra)  
“friend / companion”
- **mitaeme / mita-eme** —*noun*, from ⟨mita⟩ “friend” + ⟨eme⟩ “language”  
“language of friends”

## 7 THE UNIVERSAL DECLARATION OF HUMAN RIGHTS

Let’s close with a translation of the Universal Declaration of Human Rights, or in Mi-taeme, *Amma Pesin Cuanli Peyannname*. Hopefully, this will give you a small taste of the language in-action.

ta pesin pei siyou akuce hafe seime mayata i cuanli.  
all person PV free birth have same dignity CONJ right  
*All human beings are born free and equal in dignity and rights.*

ta ye pei tewa locika i tawiya  
all 3 PV give logic CONJ conscience  
*They are endowed with reason and conscience*

i solen niau pehanten pa mita te ceitu.  
CONJ OBLIG RECIP treat *instr* friend *gen* manner  
*and should act towards one another in a spirit of brotherhood.*
